Great horror game. If you expect a lot of jumpscare i am going to disappoint you. There are moments that Kraven Manor will scare you and make you cry but these are few throughout the whole game. What makes this game an absolute must have in your library is the dark and creepy atmosphere and the general feeling that there is someone, something behind you the whole time. A very beautiful game with gorgeous graphics that will make you forget it's an indie one.

The mechanic that allows you to interact with miniature rooms in order to gain entrance to the same rooms in the manor is innovative and brings a fresh breath to the genre.

Puzzles are not very hard to solve but neither too easy to think the game is failing. The only negative aspect of the game is the fact that is short. It will take you 50 mins - 1 hour max to finish. The great ending though will make you forget about that very fast. You should buy Kraven Manor if you are looking for a true horror experience.

<http://store.steampowered.com/curator/10128571-SquidofLuvPlays/>. Kraven Manor was developed by a team of thirteen gradate students within a six month time frame. In some ways that fact is all too apparent, in other ways it's surprising just how much was accomplished with so little.

[A first-person horror set within the eponymous building, the game's unique hook is that the structure of the whole manor can be changed dynamically. This is achieved by finding scale models of the individual rooms and setting them onto a board in the main hall, the arrangement of which determines what can be accessed. It's a really clever idea that lends itself well to an exciting scope of gameplay possibilities... or at least it could, it never really gets used to its full potential here. I think there were literally about two or maybe three instances in the whole game where the positioning of the rooms actually mattered in any significant way. Otherwise, the only thing it affected was the walking distance to the room you were heading to next.](#)

[I say "the whole game", there's isn't really all that much to it. There's maybe less than a dozen unique, relatively small areas to explore, all of which can be seen in probably about an hour for most players. But at least most of that time will be eventful as various set-pieces are triggered with regularity along the way, the vast majority of these being highly effective at unnerving the player. This is largely thanks to the main threat to your survival in the manor, a life-sized bronze mannequin that appears both lifeless and yet obsessive in its focus on your demise, made even more unsettling by its strange behaviour as it will only move and attack when not being looked at directly, otherwise perfectly playing its role of inanimate object.](#)

[So it has a solid idea at its core, a suitably terrifying creature stalking your progress and is well designed with its creepy locations and adequate visuals. But it's not without its issues. As I guess is to be expected given the nature of its birth, there are technical hiccups and bugs, several of which forced me to reload my game on more than a few occasions \(sometimes not triggering an event necessary to progress, sometimes essential items couldn't be interacted with, and on a couple of instances closing the game and spitting me back out to Steam\). Loading can also take a while, though in fairness, that's most likely due to the fact the rooms aren't in fixed locations, plus it only seems to load once at the start rather than room by room and is seamless thereafter. Movement also feels somewhat sluggish and cumbersome, though whether this is by design to add to the fear, or a result of poor programming is debatable.](#)

[Overall this ends up feeling like a very advanced prototype or proof of concept more than a fully-fledged game, and I really do hope it's developed further by the team into a greater experience. Despite its flaws, it really does have so much going for it well beyond a lot of other games in the genre made by more experienced people with more resources and hints at greater things to come for the young talents. So, if you're a fan of horror and have the patience and tolerance to see past its blemishes, then I think you'll be pleasantly surprised with Kraven Manor.. Let me start by saying this is a good game. Better than a vast majority of the indie crap that's out there. The graphics are great, the game mechanics are sound, it's a game that had an obvious amount of love invested in it. The reason I don't recommend this game is that it is terribly short experience with a threadbare story and few real action pieces. The game isn't an experience in terror, like some would claim, but felt more like a teaser to a much bigger game. I'd say this was more a \\$5 game than \\$10. Even so, if you've got money to burn and an hour to kill, go ahead and give it a go.. This is a really well done, VERY short game with relatively little replay value... it would be a rental if such things still existed. I would reccomend purchasing it on sale.](#)

[What it does, it does very well. The game is creepy, well orchestrated, has some neat lay-out mechanics, and gives a nice feeling of unease throughout the story... the problem is that there just isn't much story. There's no intro or reason why you're in the](#)

manor in the first place... no investigation is mentioned, and the clues to the tale are scattered minimally throughout the game.

The antagonist is effectively creepy until you figure out the mechanic behind the attacks and how to stay safe... and at that point, the game suddenly begins to feel like a rail haunted house ride. You're there to experience a mostly linear story, and you can do it in relative safety. It just doesn't feel like it at first.

If I knew there would be more game added on to what's already here, I'd recommend it at full price. As is, its just really far too short.. I Twitch streamed a blind run on this game and I was grateful to have others helping me get the idea at the beginning, however once they pointed out the map elements to be collected and assembled it made a lot more sense, and I enjoyed the game a lot. It's supposed to be fairly short (under 1hr) to play, but it's a great little game with some good mood setting and nice scares. Worth considering.

PROS:

Great atmosphere

Quite original (for a game that takes place in a haunted house)

Don't need to be into horror games to enjoy it

Fun to speed run/replay

Great music

CONS:

Can be douche-y at times

Stereotypical 2-second sprint

Has that one achievement that's much harder than the others

Is very short (around 1hr)

SPOILERS:

This is one of my favorite games just because of the two sequences at the end.(one being the secret ending)

. For those considering buying this game, know that it is **REALLY SHORT**. If you're comfortable with purchasing a game you can finish in around an hour for the listed price, go for it.

This is a good game. Fairly predictable, yet surprising in its own ways. I enjoyed it.. The game has nice graphics, and you'll be scared a few times. The mechanics of the antagonist are fairly sweet.

It's a good experience, rather short though. I'd really recommend getting it when it's on sale, especially if you enjoy horror games.. To god damn short, took me an hour to complete, not that scary, maybe worth half the current price. Vote down as you wish but it's the truth, sadly.

I don't understand why or how people can write an essay of a review for it.. If you're looking for a challenging game, this is not it. Encounters are very tense but quickly become easy to handle. It's worth a try if you enjoy making others play the game and watch their reactions but other than that, there's not much to go back to after finishing the game.

Overall good game.
